

ESD demo board set

Product Number EP1501002

Product Description

ESD demo board to illustrate the development of ESD damage to electronic components.

The ESD demo board is an experimental setup that allows participants in seminars and training courses on the subject of ESD to experience the pre-damage and destruction of an ESD-sensitive component (ESDS) in a practical way. Demonstrate the difference when an earthed person and a non-earthed person touch the contact surface of the demo board.

This leads to a lasting learning effect: anyone who has experienced this experiment will be very well sensitized to the invisible dangers of ESD.

Scope of delivery:

- ESD demo board,
- 9Volt battery, 6LR61
- Instruction manual
- EP1501003: 20 replacement FET transistors (please only use these for proper function)
- EP0105001: Wrist strap DK10,
- EP0103011: Spiral cable 2.00 m, DK10-DK10,
- EP0101001: Earthing module 3xDK10, 1 MOhm,
- EP0103006: Earthing cable 1.50 m, DK10-DK10,
- EP0103007: Earthing cable 0.25 m, DK10-DK10,
- Work mat, 210 x 297 mm (DIN A4), with 4 connections
