

Data logger app for EPA-RESIST 8000

Product Number EP0206078

Product Description

Receive the test results of your EPA-RESIST 7000/8000 personal testers automatically – digitally – live!

The software saves all measurement logs of the EPA-RESIST 7000/8000 devices in the network live (in real time) in a daily report (.csv file) centrally on a PC in a single file. This means that the log data no longer has to be retrieved and compiled by each individual personal tester. The directory path for the log file can be freely selected.

Many filter functions help to comply with individual data protection guidelines. The ESD personal tests can even be completely anonymized to exclude so-called movement profiles.

Advantages:

- The test results of all connected EPA-RESIST 7000/8000 ESD personal testers are combined in CSV format in a single daily report and stored centrally on a PC/server. This eliminates the need to read out the individual devices via the web interface.
- Thanks to the CSV exchange format, the daily report can be further processed in a variety of ways or simply imported into Excel.
- Measurement logs can be filtered and evaluated in accordance with data protection guidelines.
- Simple commissioning (executable .exe file)
- Supplied on USB stick.

System requirements:

The "ESD data logger" application was developed for the Microsoft .Net framework and therefore does not need to be installed. The .NET Framework is used by all Microsoft Office programs and is therefore installed as standard on all Windows PCs.
