

Rental device Calibration Unit CU 800

Product Number EP1601030

Product Description

PRORENT rental device

Price per week

Fully automatic calibration station for EPA-RESIST 7000 and 8000.

The Calibration Unit CU 800 was developed for the regular calibration of EPARESIST personal testers. Manual switching of the individual resistors has been dispensed with. The limit values are also displayed with real measured values. After starting the program, the CU 800 automatically measures fixed reference resistors with the three possible measuring voltages 33V, 50V and 100V.

Any deviations are detected and documented. The total calibration time is only 21 seconds. The test results are saved in a CSV file on a USB stick. This can then be easily formatted, saved and printed using Excel. The CSV file can be read in with Excel and individually formatted for a better overview.

Advantages:

- Calibration can be carried out on site
- EPA-RESIST does not need to be dismantled
- No need to send in the EPA-RESIST device
- No need to keep a spare device in stock
- Permanently reliable measurement results

Scope of delivery:

- CU 800 calibration device
- Data cable
- Serial connection cable
- USB stick
