

U-lock with two swivel arms

Product Number EP0301025

Variants Design: Chrome-plated

Product Description

A well-designed entrance system for ESD-protected areas (EPA) that is tailored to the structural conditions ensures that only authorized persons have access to these areas through the Protect Gate.

Modular design:

The Protect Gate system is an entrance system with a modular design, flexible opening controls and a wide range of options. The basic kit consists of the motorized pillar, to which various brackets (frame bracket, Plexiglas or safety glass) can be attached and which can be completed with additional control kits (radar sensor, photocell or radio remote control).

High-gloss chrome-plated surfaces (standard), optionally coated in other colors, also in your RAL color of choice.

Security:

Mechanical panic protection – the system can be opened in both directions by pressing against the handle in the event of danger.

Electronic safety – The system is stopped immediately if people or objects are in the swing area and block the bar.

Emergency opening – The system can be opened in the exit direction in the event of a fire alarm. Automatic opening in the event of a fire alarm is possible as an option.

In the event of a power failure, the holding brakes are automatically deactivated.

All Protect Gate motorized columns (single and double systems) have an illuminated ring at the top for the gate status with the following colour codes:

- **Green:** Release, gate opens
- **Red:** Gate closes
- **Flashing red:** Alarm

Version:

- 2x basic structure for tubular swivel bracket, chrome-plated,
- 2x power supply in the base,
- with mounting material,
- 2x frame bracket swivel arm round 1200 x 300 x 1200 mm (max. 1400 mm) chrome,
- with information sign printed crystal clear,
- with arrow and lock symbol,
- Adapter for external connection,
- Connection to remote control
