

## Velostat film/ foil, 46 m roll

**Product Number** EP1301009

**Variants** Width: 91,4 cm

### Product Description

The conductive film consists of a volume-conductive, carbon-impregnated polyethylene and is mostly used for material handling, shipping and storage in the electronics or chemical industry.

In addition to physical protection, the film also offers protection against electrostatic influences. The discharge capacity is not affected by moisture or ageing.

The film is heat-sealable, flexible and offers exceptional resistance to chemicals and abrasion. It contains no amines, silicones or heavy metals and is therefore RoHS-compliant.

- Roll length: 46 m
- Roll width: 91.4 cm
- Film thickness: 4.0 mil (0.102 mm)
- Material type: Conductive carbon-loaded PE
- Color: black
- Thermal properties: Heat sealable
- Volume resistance: 500 Ohm-cm
- Static decay: 2 sec

**Please ask for delivery time.**
