

Polyester film per meter, self-adhesive, dissipative on one side

Product Number EP1301017

Variants lfm: 1

Product Description

Polyester film, dissipative, self-adhesive, roll

Polyester film on a roll, with a special, abrasion-resistant surface coating for subsequent antistatic treatment of smooth, insulating surfaces, transparent, self-adhesive and conductive on one side. With a maximum length of 100 meters, this dissipative polyester film can be used to bond insulating surfaces easily and over a large area, making them ESD-compliant in accordance with the IEC 61340-5-1 standard. With a thickness of 0.1 mm and a roll width of 1.22 meters, surfaces can be bonded quickly without adding too much bulk.

- For subsequent bonding to insulating surfaces
- Width x length 1.22 m x 1-100 m
- Price per running meter (for a width of 1.22 m)
- Typical surface resistance $RS = 10^6 - 10^8 \text{ Ohm}$
- **conductive on one side**, abrasion-resistant, transparent, **self-adhesive**,
- complies with IEC 61340-5-1,
- Thickness: 0.1 mm
