

SMP EM Aware Monitor

Product Number EP0205031

Product Description

The SMP provides companies with an **effective means of identifying electrostatic discharge (ESD)** and preventing component failure.

Using static control tools, companies can reduce their losses due to electrostatic discharge, electromagnetic interference (EMI) and electrical overstress (EOS) and gain a competitive advantage in the marketplace. SMP can help you identify and solve problems related to ESD, EMI and EOS.

By helping to minimize these issues, SMP can optimize your operations, resulting in potential cost savings and increased customer satisfaction. Together with the static diagnostic control developed by SCS, SMP detects and measures actual ESD events as well as EOS situations or electrical overstress, rather than just assessing the potential for such events.

SMP products record and read data, but do not test it and leave the interpretation to the user.

The kit contains:

- 1 x SMP program license
- 1 x grounding point monitor unit for max. 8
- 1 x workstation monitor for 2 places
- 3 x EMS monitors incl. antennas
- 1 x Ethernet 8-port switch
- 6 x CAT5E cables

- Hand luggage case with lid organizer and foam insert
