ESD Inventory Management

(ESD-PROTECT

From paper-based systems and Excel to ESD audit compliance

Efficiently document and manage ESD measurements

Compliant ESD testing – simple and audit-proof

Record your ESD measurement data from the following tests centrally in a single software package:

- Resistance, field strength, charged plate, walking test

This allows you to organise your ESD measurements efficiently and keep track of upcoming tests in accordance with DIN EN 61340-5-1 at all times.

Intuitive user interfaces help you create objects in a structured manner, manage locations and plan measurement intervals reliably.

Predefined limit values, sample inventories and clearly defined measurement points enable even less experienced users to carry out measurements safely and in accordance with standards.

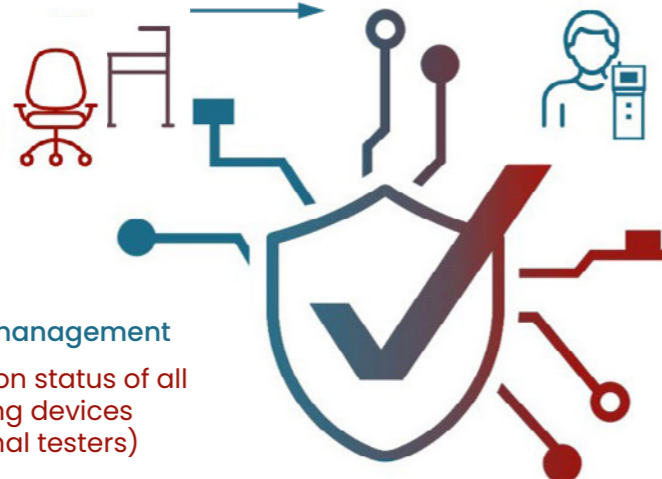

Audit-proof measurement reports are available at any time in digital form and as PDF downloads.

Inventix combines ESD measurement data management and test equipment management in a single solution – from standard-compliant measurement documentation to calibration monitoring of all test equipment.

Inventix® is that simple

Take measurements quickly and without any prior knowledge

Select measurement objects in the software

Take the measurement

Resistance, field strength, charged plate, walking test

Automatic data transfer with the TR 8000 or manual recording on other measuring instruments

Analysis & Documentation

In addition: ESD test equipment management

Manage the calibration status of all existing ESD measuring devices (including ESD personal testers)

Why we developed Inventix® – our mission

Inventix® was created because there was a need for it

More than 20 years' experience in the field of ESD has shown us one thing time and again:

Our customers' day-to-day challenges are rarely theoretical – they are practical, tangible and often unnecessarily complicated.

During countless customer meetings and on-site visits, we repeatedly encountered the same picture: Excel spreadsheets, handwritten notes, loose sheets of paper – established systems that have to work in day-to-day operations but quickly reach their limits during audits.

The need was clear.

Our customers wanted greater clarity, greater security and, above all, a solution that fits in with their day-to-day work.

That's how the idea for Inventix came about.

One thing that stood out in particular was that there was no software solution capable of managing measurement data and inventories in a structured, audit-proof manner with clear filter

functions, and of seamlessly importing measurement results from measuring devices.

This was precisely where a crucial gap lay.

As both a manufacturer of ESD measuring instruments and a software developer, we bring together two worlds that were often kept separate. This combination has enabled us to take a holistic approach to Inventix right from the start.

The result is more than just a piece of software – it is a well-designed ESD management system that streamlines processes, reduces errors and ensures compliance with audit requirements.

And Inventix continues to evolve.

With a one-off purchase and a software service package, you not only secure access to the current range of features, but also to all future enhancements and updates.

Inventix was created because there was a need for it.

And it continues to grow – in step with our customers' needs.

Inventix® combines two key functions

ESD measurement data management:

Documentation and centralised management of all ESD measurements relevant to standards

ESD test equipment management:

Management and monitoring of the calibration status of all existing ESD test equipment

Automatic test planning

Never miss a deadline again – Inventix will reliably remind you.

Centralised inventory and test equipment management

All inventory and measuring equipment in one place – organised and easily accessible.

Audit and reporting function

Create inspection reports and other reports at the touch of a button – 100% audit-proof.

Real-time status overview

Keep track of inspection statuses, deadlines and actions.

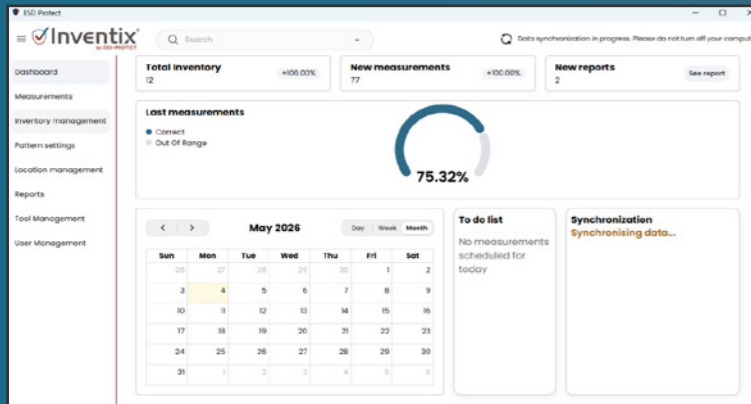

User & Permissions Management

Manage access and responsibilities transparently and securely.

Intuitive menus and clear structure

Much of it is already pre-set – ready to use

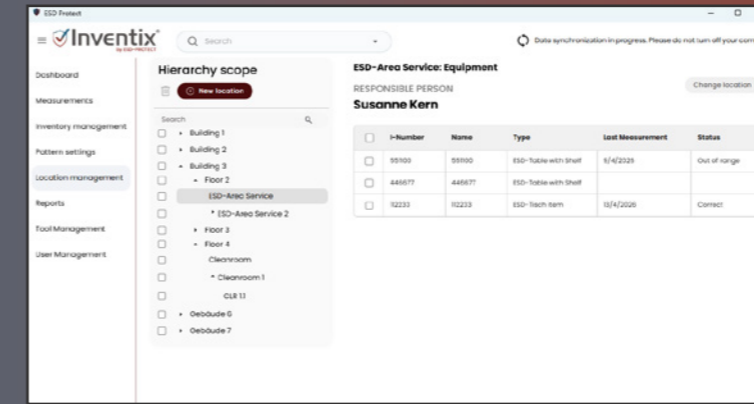

Dashboard

The dashboard provides a concise overview of the status of all ESD inventories within the EPA and provides information on upcoming and completed measurements.

- Integrated calendar showing due test dates and flexible view modes
- To-do list for all upcoming measurement tasks
- Key figures overview for inventories and most recent measurements

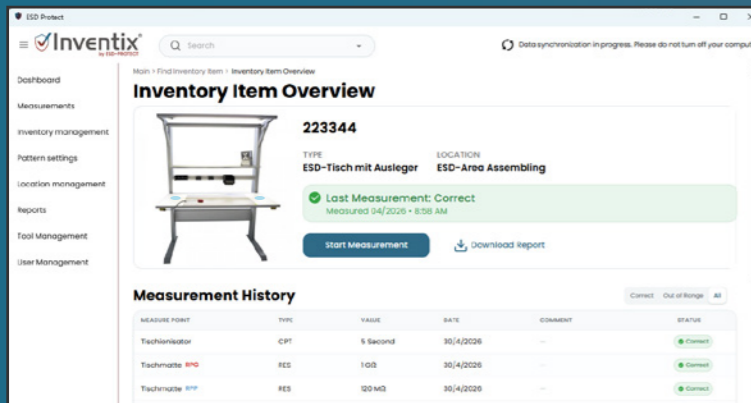

Location Management

Inventories can be organised in a structured manner across up to four spatial levels and clearly assigned (cluster management).

- Improved traceability of measurement objects – even for non-specialist staff
- Inspections can be grouped and scheduled by building, department or as daily tasks
- Each item has a unique identification number and can be recorded quickly and securely via QR code, RFID or barcode

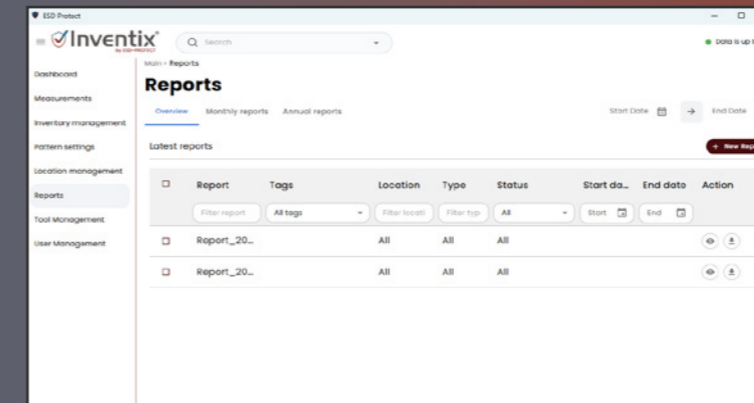

Measurements

Measurement points for surface and leakage resistance can be precisely defined on the photograph of the test object, enabling even non-specialist staff to carry out measurements safely and accurately.

- Visual definition of measurement points directly on the photograph of the object
- Automatic reminder function for upcoming and overdue measurements (including email notification)
- Display of detailed measurement information

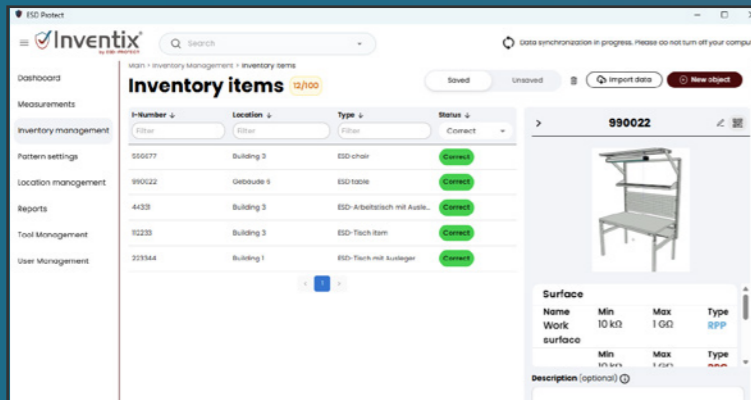

Reports

The reports provide an audit-proof record of all measurements taken. They can be generated at the touch of a button and easily exported as PDF or Excel files.

- Creation of comprehensive and structured measurement reports
- Digital test report for every item of inventory – including photos and history
- Audit-relevant measurement data fully meets all requirements (100% audit-compliant)

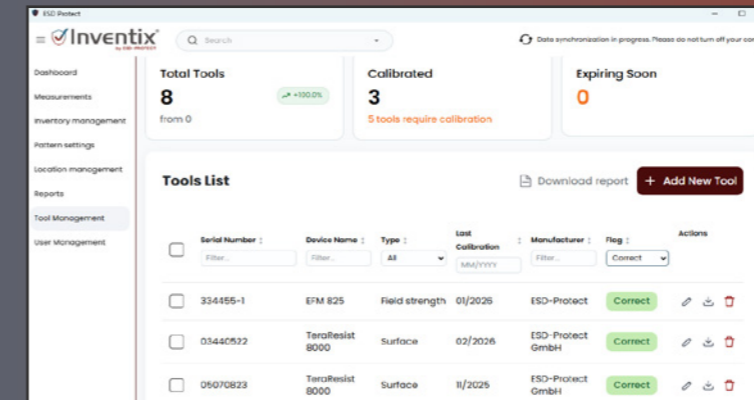

Inventory Management

All assets can be managed in a compact overview with status indicators and searched for using versatile filter functions.

- Filter by location, unique ID number, measurement status or asset type
- Detailed view with full measurement values and a clear measurement history
- Create new assets or import from Excel

Tool Management

All existing ESD measuring and testing equipment, including the relevant calibration information, can be accessed centrally.

- Automatic monitoring of all upcoming calibration dates
- A clear list of all measuring instruments, including their serial numbers and current calibration status
- Detailed individual reports for each measuring instrument – including a photo and full documentation

Inventix®-Webinar

Let us show you  **Inventix®**

See for yourself how our software optimises your processes

Whether in a webinar or a one-to-one presentation – we'll show you Inventix® in a way that suits your needs perfectly.

Get in touch with us; we look forward to introducing you to the software.

Start now with Inventix®

See for yourself just how simple and efficient modern ESD inventory management can be.

Inventix® - a far-sighted decision

Audit and legal compliance

Comprehensive documentation and compliance with all ESD standards protect you during inspections and audits.

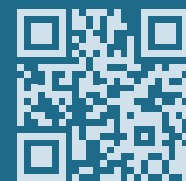

Time savings

Automated processes reduce effort and minimise the risk of errors.

Future-proof

Scalable, updatable and always up to date – updates included.

Experience Inventix® for yourself!
