

Inventix®

ESD measurements
from the measuring device
directly into the software

Intelligent software for digital
and simple ESD management

Smart measurement data & ESD inventory management

100%
audit-proof and
compliant with
standards!

Inventix is smart ESD inventory software for the digital management, monitoring and standard compliant testing of ESD equipment and ESD workstations. Through the direct connection of measuring devices, fully automatic data collection and integrated standard testing, Inventix significantly simplifies ESD management.

With Inventix, all inventories and measurement points are documented in a transparent, secure and traceable manner – for efficient processes and maximum ESD safety. Developed by ESD-PROTECT.

The advantages at a glance:

- Automatic inventory of all ESD components
- Direct measurement data acquisition
- Immediate ESD standard testing
- Flexible recording technology (QR code, barcode or RFID)
- Import of existing inventories
- Smart new creation of measurement objects

- Measuring device control directly from the software
- Cluster management (structuring by area, department or location)
- Visual inventory allocation (photo)
- Digital measurement instructions
- Customisable limit values
- Automatic reminder function for due measurements
- Digital measurement log at the touch of a button
